Mop Wastewater Dump Station XL

Dirty Fluids Collection and Transfer Station

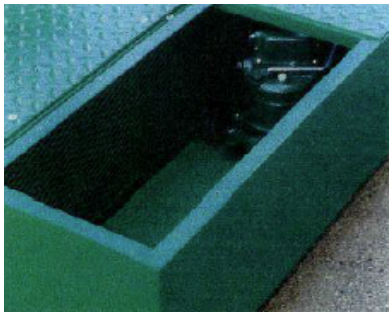

Pull-Out Screen Baskets

Lift-Up Splash Guard Cover

Float Activated Sump Pump

FEATURES

The Mop Wastewater Dump Station XL (Model # WE-4000) has a low profile, which accommodates gravity discharge from floor scrubbing equipment and is a comfortable height for manual dumping of mop buckets. The WE-4000 is built with a hinged dumping cover that is used as a splashguard when opened as fluid is dumped into it. There are removable screened baskets which are designed to capture large debris e.g. scrap papers, metals, etc. The baskets are also provided with rising handles on the sides to make it easier to lift out. Just upstream of the sump pump, a final filter with 1/8" perforated screen provides small debris filtration and protects the transfer pump from damage. Standard, float-activated sump pump will deliver up to 15 GPM @ 15' of head. An upgraded model WE-4023 will deliver up to 23 GPM @ 23' of head. All models include powder coat paint on all surfaces for outstanding resistance to rust and corrosion.

BENEFITS

- Only one (1) mechanical part: a float activated sump pump
- Used with floor scrubbers or mop buckets
- Reduces back strain for manual dumping of fluids
- Auto float pump prevents overflow
- All models include powder coat paint on all surfaces for outstanding resistance to rust and corrosion.

SPECIFICATIONS

- Standard configuration is 4'W x 6'L x 12" H
- 12 &14 gauge steel construction
- Pull out basket screens designed to hold up to 30lbs.
- All pump options have 1-1/2" outlets.
- WE-4000 and WE-4023 require 115-vac/15 amp electrical service
