

Low Profile Grease Interceptor

The First Truly Low Profile Grease Interceptor

Based on the same dimensional footprint as our successful 35gpm and 50gpm models, this latest 25gpm addition has an overall height of just 11 inches, and still meets the requirements of ASME112.14.3.

More importantly however the internal components can be removed in less than 5" of additional clearance making this unit a truly low profile solution.

Sewer authorities and building owners spend millions of dollars every year combating grease accumulation in plumbing systems.

Grease accumulation causes sewer blockages and overflows. These overflows are a health risk to you, your employees, your customers and the general public. Injection molded in engineered thermoplastic, Drain-Net Grease Interceptors provide restaurant operators the best value and performance on the market today.
