What is that smell coming out of my shower drain?

Many people notice foul odors emitting from their shower drain. Most likely these smells are coming from a septic tank or the sewer. Not only can these odors “stink”, they can also be dangerous to you and your family. That’s why Drain-Net offers the “Green Drain“. It features a one-way valve and creates a seal to eliminate floor drain odor issues. The Green Drain allows water to drain down your pipes, but nothing can come back up. This also makes it a great solution to stop unwanted pests from crawling up your shower drain.

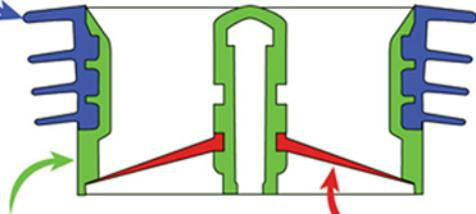

When the water level gets low, sewer and septic tank odors can come in to your home.

The Green Drain allows water to drain freely, but blocks the stinky smells!

Green Drain is the Sanitary, eco-friendly and chemical free solution! It is simple and easy to install with no mechanical parts. Simply unscrew your drain cover, and fit into the pipe. Most shower drain pipes are 2” or 3” so be sure to measure before you order.

HIGH QUALITY OUTER ANCHORING creates a secure, tight seal.

ABS HOUSING is durable and reliable.

NITRILE RUBBER SKIRTS enable water to drain while preventing gases and insects from entering the room.

2” Green Drain

Instructions:

1. Remove the shower drain cover
2. Insert the Green Drain into drain
3. Place our shower strainer on top of drain to capture hair.

The 2” Green Drain fits drains with inside diameters between 1.5” and 2”
