

The Green Drain stops, odors, bugs, and harmful sewer gasses from entering facilities through floor drains!

The Green Drain by Drain-Net Technologies, is a one way valve that creates a seal in the floor drain. It allows water to freely drain into the piping system, but prevents maggots, roaches, drain flies, and other unwanted pests from the sewer from crawling up into the facility. It can be installed in industries such as hotels, restaurants, schools/universities, hospitals, food processing plants and more.

Benefits

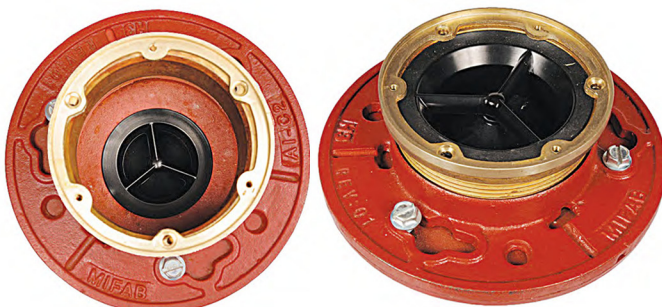

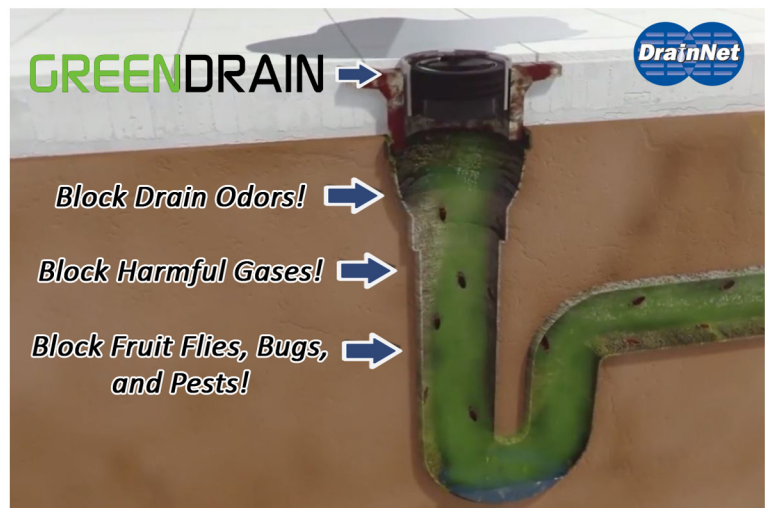

- Stops bugs and pests from entering the facility through floor drains
- One way valve creates seal to eliminate floor drain odor issues
- No more gases from floor drains
- LEED certified for new building construction. NYC Approved
- Sanitary, eco-friendly and chemical free solution
- Great alternative to a costly trap primer with simple installation, no mechanical parts to replace or maintain, & improved drainage quality
- Lasts several years and easy installation

Function: Used in the outlet connections of floor drain bodies, or the inside of floor drain strainers to seal the opening to prevent odors, sewer gases, and insects from entering up through the floor drain grate. The Green Drain's four flexible silicone sealing ribs ensure easy installation into openings that have variations in size. The Green Drain will open to allow drainage and close when there is no water flow. The Green Drain can be used in either new construction or retro-fit applications where trap primers were never installed.
